DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 2, drawn to a device for indicating the locking state of a fifth wheel coupling, classified in class 280, subclass 433.
 - II. Claims 3-7 and 12-14, drawn to an apparatus, classified in class 280, subclass 435.
 - III. Claims 8-11, 15 and 16, drawn to an apparatus, classified in class 280, subclass 432.
2. The inventions are distinct, each from the other because of the following reasons:
 - a.) Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require a kingpin having an upper collar, a middle section with a reduced diameter for engaging with a locking latch and a lower collar. The subcombination has separate utility such as in a fifth wheel coupling that only requires one sensor and not a second, magnetically sensitive sensor.

Art Unit: 3611

b.) Inventions I and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require a locking latch arranged underneath the coupling plate, which latch can be brought into an open position or a closed position via a locking mechanism that is attached to an operating lever. The subcombination has separate utility such as in a fifth wheel coupling that only has a magnetically sensitive sensor and not an additional kingpin detection sensor.

c.) Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions II and III have separate utility such as in separate fifth wheel coupling apparatus that sense different conditions (Invention II senses if a kingpin is present and Invention III senses a locked/unlocked state of an operating lever). See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Group I, II or III is not required for the other of Group I, II or III, restriction for examination purposes as indicated is proper.

Art Unit: 3611

4. A telephone call was made to Daniel Hudak, Jr. on 10/6/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matt Luby whose telephone number is (703) 305-0441. The examiner can normally be reached on Monday-Friday, 9:30 a.m. to 6:00 p.m..
